

Ivana d'Angelo is Associate Professor of Pharmaceutical Technology at the DiSTABiF, University of Campania "Luigi Vanvitelli." Her research focuses on the design and development of micro- and nanostructured drug delivery systems, particularly biodegradable systems intended for mucosal administration. She is engaged in exploring innovative polymeric platforms tailored to specific administration routes or therapeutic needs, with a strong interest in antimicrobial therapy and targeted treatments for respiratory infections. She is the author of 42 peer-reviewed articles published in international journals (ISI WOS, h-index 23) and more than 100 contributes to national and international scientific meetings. Over the years, she has coordinated and participated in several competitive research projects, including those funded by the Italian Cystic Fibrosis Foundation, aimed at developing innovative therapeutic solutions for lung infections.
