Research areas: agricultural products, food products, plant products, laboratory diagnostics, agrochemical research, microscopy, agrobiology, plant physiology and development.

Research keywords: agricultural products, food products, plant products, laboratory diagnostics, agrochemical research, microscopy, agrobiology, plant physiology and development.

Marharyta Trokhymets – is a leading biologist servise and analytical center LLC «INSTITUT ZDOROVYA ROSLYN» ISU «UKRAVIT SCIENCE PARK».
The work focuses on researching quality indicators of agricultural facilities and diagnosing plant diseases in laboratory conditions. She conducts scientific research on the impact of various agrochemical products on plant growth and development. Marharyta is actively involved in laboratory experiments and analytical studies, contributing to the improvement of plant health management and crop productivity. She received her degree in biology in 2018 at Bohdan Khmelnytsky National University of Cherkasy.
She is a participant in a scientific project ‘Novel optical nanocomposite sensors for analysis of micro and macro elements in corn plants’ HE-MCSA-RISE-2022, Sens4Corn, grant number 101086364.
